

Risk Management Policy

Objective

To establish a consistent professional framework for FX strategy development, capital protection techniques, and performance discipline, even within simulated environments.

Portfolio Construction

- Max 1–3 open positions in core G10 pairs
- Exposure aligns with interest rate differential direction
- Focus on liquid pairs with narrow spreads

Position Sizing

- Risk per position target: 0.25% – 0.75% (simulated capital)
- Never exceed 2% portfolio VaR from a single country exposure

Position size derived from:

- Volatility
- Rate differential strength
- Technical trend strength

Leverage Control

All positions must contain:

- Hard stop-loss
- Defined take-profit
- Time-based exit if thesis invalidated by rate changes or central bank actions

Focus: Capital preservation > catching every move

Leverage Control

I. Mandatory

- Central bank rate decisions
- CPI / labor data
- Surprise index shifts
- Geopolitical disclosures

II. Trades paused during

- Central bank rate decisions
- CPI / labor data
- Surprise index shifts
- Geopolitical disclosures

Monitoring & Reporting

I. Monthly reporting

- Position rationale
- PnL (simulated)
- Risk vs reward review
- Journal notes for continuous improvement

I. Quarterly

- Strategy enhancements reviewed
- Drawdown analysis

Continuous Compliance

Should external capital or regulated activity ever begin:

- Immediate regulatory onboarding
- MiFID II & AIFMD compliance readiness

Vision Statement

Professional discipline applied from Day 1 — regardless of capital scale.
